

PROJECT REPORT

on

“Smiles For Miles Tourism”

Submitted to

Rashtrasant Tukdoji Maharaj Nagpur University, Nagpur

In Partial Fulfillment of the requirement of

Bachelor of Commerce (Computer Application)

Submitted by

Aditya Lambat

Chetan Barange

Sakshi Bannagare

Under the Guidance of

(Prof. Kothiram N. Girsawale)

**Dr. Ambedkar Institute of Management Studies &
Research DeekshaBhoomi Nagpur-440012**

(2021-2022)

CERTIFICATE

This is to certify that **Aditya Lambat , Chetan Barange , Sakshi Bannagare** has satisfactorily completed the project work entitled “**Smiles For Miles Tourism**” in not less than one academic session. This also certify that this project work is the result of the candidate’s own work and is of sufficiently high standard to warrant its presentation for the B.Com (Computer Application) program.

To the best of my knowledge this project or its part has not been submitted to this university or any other university for any Degree/Diploma.

Guide Signature

Place: Nagpur

Date:

Director

DECLARATION

We, **Aditya Lambat , Chetan Barange and Sakshi Bannagare** hereby declare that the project entitled “**Smiles For Miles Tourism**” is the outcome of our own research work based on personal study during academic session 2021– 2022 and has not been submitted previously for award of any degree or diploma to this university or any other university.

Aditya Lambat

Chetan Barange

Sakshi Bannagare

ACKNOWLEDGEMENT

“Words have never expressed human sentiments. This only an attempt to express our deep gratitude which comes from our heart.”

It is a great pleasure for us to express our deep feeling of gratitude to our respected guide **Prof. Kothiram N. Girsawale (Lecturer, Dr. Ambedkar Institute of Management Studies & Research, Nagpur)** for his great encouragement and unfailing support which provided needed moral and confidence to carry on our work.

We are grateful to the **Dr. S. S. Fulzele, (Director, Dr. Ambedkar Institute of Management Studies & Research, Nagpur)** for making all facilities available for our work.

It is with profound gratitude that we wish to express our indebtedness to **Dr. Nirzar Kulkarni (Asst. Director, Dr. Ambedkar Institute of Management Studies & Research, Nagpur)** for his invaluable guidance and supervision in completion of this project work.

We are great to our parents for their lovable support. Last but not least we are thankful to our friends and other faculty member for their direct and indirect help for completion of this work.

1. Introduction

Tourism has turned out to be an economic booster contributing to the economic development of many countries over the last few decades. People see holidays as a necessity, and not as luxury in the present scenario. Tourism calls for coordination and cooperation between travel agents, tour operators, and tourists. Tourism has a few major elements – destinations, attractions, sites, accommodation, and all ancillary services. The need for a robust and dynamic tour management application has been around since the advent of the tourism concept.

Thus, we have developed an application to provide the best travelling services to the customers and travel agents. The Tourism Management System provides a search platform where a tourist can find their tour places according to their choices. This system also helps to promote responsible and interesting tourism so that people can enjoy their holidays at their favorable places and develop tourism with different cultures so that they enrich the tourism experience and build pride. The Tourism Management System is a web-based application. The objective of this project is to develop a system that automates the processes and activities of a travel agency. It is tedious for a customer to plan a particular journey and have it executed properly. This project is developed to replace the currently existing system, which helps in keeping records of the customer details of destination as well as payment received. The proposed system is highly automated and makes the travelling activities much easier and flexible. The users can get the very right information at the very right time. This will increase the trust of the customer into the tourism company as well.

This project is designed with MySQL as back end. All the data will be stored in the apache server and in case of any data losing situation, a backup will be available by this server. The details related to every aspect of the tourist will be available separately. The admins just have to click once and all the details will be available to them.

2. Objectives

- 1.** To develop a system that automates the processes and activities of a travel and tourism agency.
- 2.** To design a system using which one can perform all operations related to traveling and sight-seeing.
- 3.** To search details of the Customer, Package, Booking etc.
- 4.** To make a Tourism Management System online application, from which user can easily manage Package details and prices.
- 5.** To allow Admin to track all the information of Package ,Customer Transportation etc. Admin can create, delete and update the records of packages , Booking.
- 6.** To manage the information about of Transportation, Travel Agent, Package in extremely clear manner.

3. Preliminary System Analysis

First in the system development process is preliminary Investigation.

Preliminary Investigation is conducted in the following phases.

a. Present System in use b. Flaws in Present System c. Need of New System d. Feasibility study e. Project Category

a. Present System in Use :

In the present system a customer must approach various agencies to find details of places and to book tickets. This often requires a lot of time and effort. A customer may not get the desired information from these offices and often the customer may be misguided. It is tedious for a customer to plan a journey and have it executed properly.

b. Flaws in Present System :

The present systems are inadequate in providing information and advices to the agencies and customers about tour plans. Often agencies are compelled to rely on local information sources and count on their own experiences regarding time and cost. Through phone call they have to get information.

c. Need of New System :

The new system is highly automated and makes the travelling activities much easier and flexible. The user can get the very right information at the very right time. Customers can get the knowledge of the hotels and vehicles

they are going to use in their trip prior to their starting of trip. This will increase the trust of the customer into the travel company as well.

Once the bookings are confirmed all the travel details, customer details as well as all the relevant details related to the trip like hotel name, room number, vehicle number, vehicle owner's details, date of arriving, date of departure, food to be served and every single detail will be available to the client. They just need once to click using mouse and everything is made available to them.

d. Feasibility Study :

The feasibility study is performed to determine whether the proposed system is viable considering the Technical, Operational and Economical factors. After going through feasibility study, we can have a clear-cut view of the system's benefits and drawbacks.

Technical Feasibility :

The proposed system is developed using Active Server Page, HTML as front-end tool and My SQL as the back end. The proposed system needs a

Personal Web Server to serve the requests submitted by the users. The Web browser is used to view the web page that is available within the Windows operating system itself. The proposed system will run under Win9x, NT, and win2000 environment. As Windows is very user friendly and GUI OS it is very easy to use. All the required hardware and software are readily available in the market. Hence the system is technically feasible.

Operational Feasibility:

The proposed system is operationally feasible because of the following reasons.

- ✦ The customer is benefited more as most of his time is saved by finding perfect travel guide with the wonderful packages & affordable rates.
- ✦ The cost of the proposed system is almost negligible when compared to the facilities and amenities gained.

Economic Feasibility:

As the necessary hardware and software are available in the market at a low cost, the initial investment is the only cost incurred and does not need any further enhancements. Hence it is economically feasible.

The system is feasible in all respects and hence it encourages taking up the system design.

e. Project Category:

Relational database tables are like conventional tables; however, relational database terminology is somewhat different from conventional table and file terminology. A single row of a table is called a row, table or record, and a column of a table is called an attribute or field. A single cell in a table is called an attributes value, field value, or data element.

4. SOFTWARE ENGINEERING PARADIGM APPLIED

a. Modules

b. System/Modular Chart

a. Module :

It has three modules Administrator module, User module and Guest Module.

1. Administrator module :

Admin have options like Dashboard, Bookings, Packages, Transactions, Messages, Settings.

- Dashboard- Here admin can view all count of booking, issues , Enquiries and Users.
- Booking- Admin will responsible for managing booking. Admin can confirm and cancel a booking of traveler.
- Packages—Admin will create the packages and Manage the packages (Create, Update, delete) Users- Admin can view all Information of all users.
- This module provides administrator related functionality. Administrator manages all information and has access rights to add, delete, edit and view the data related to places, travels, bookings, Enquiries etc.
- Manage Enquiries—admin can manage all enquiries raised by users (traveler).
- Change password--- Admin can change own password.

2. User (Traveler) Module :

User have options like **Home, India, International, About us, Contact us, login.**

- Signup- User can register our self for booking.
- Login- Here user can login with valid username and password.
- Forgot Password—User can recover his/her own password
- My Profile- user can update own profile.
- Tour history-After login user can book any tour that will show in Tour history. User can cancel his/her booking before 24hr of booking.
- Change Password---- User can change his/her Password.
- Enquiry form ---- user can enquire about anything by writing just name and issue.

3. Guest Module :

- Guest user can visit the website and view the all content of website. Guest user can also Enquiry.

b. System/ Modular Chart :

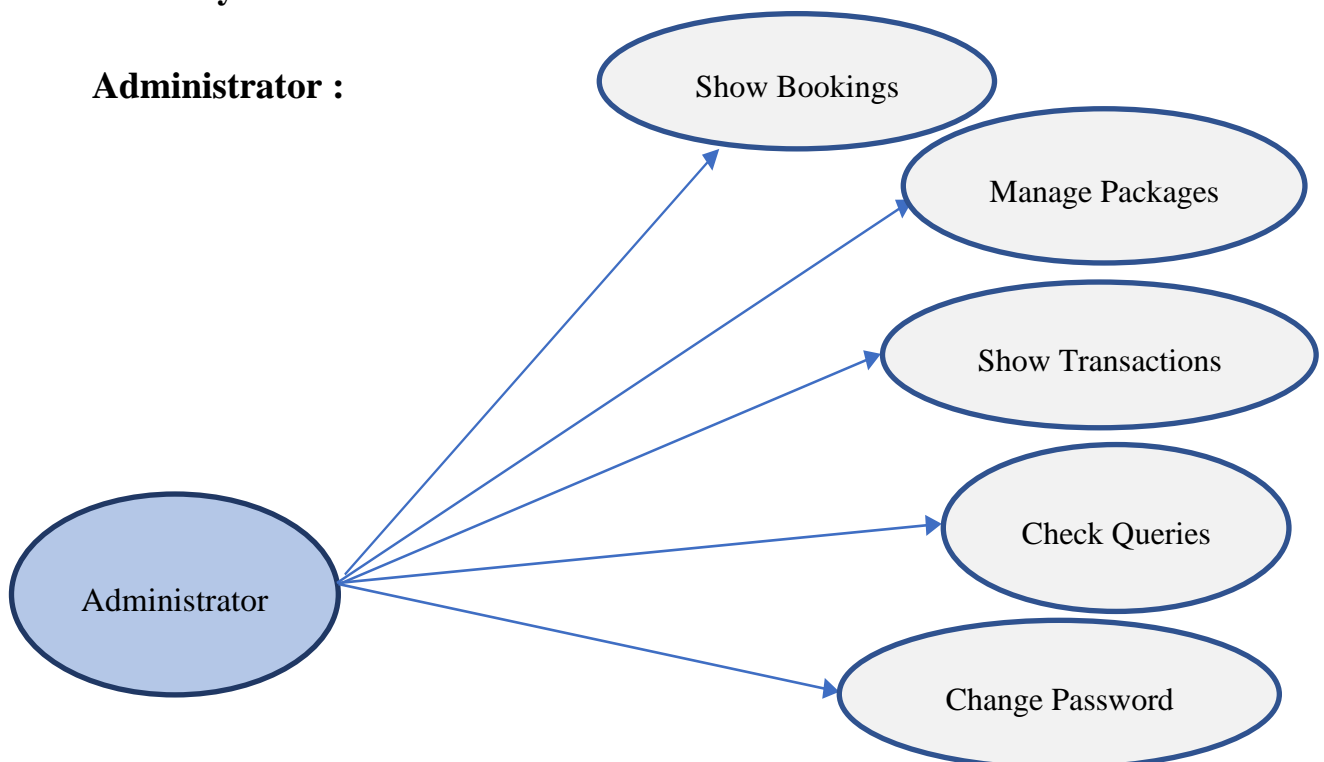

Chart 4.b.1 admin modular chart

User :

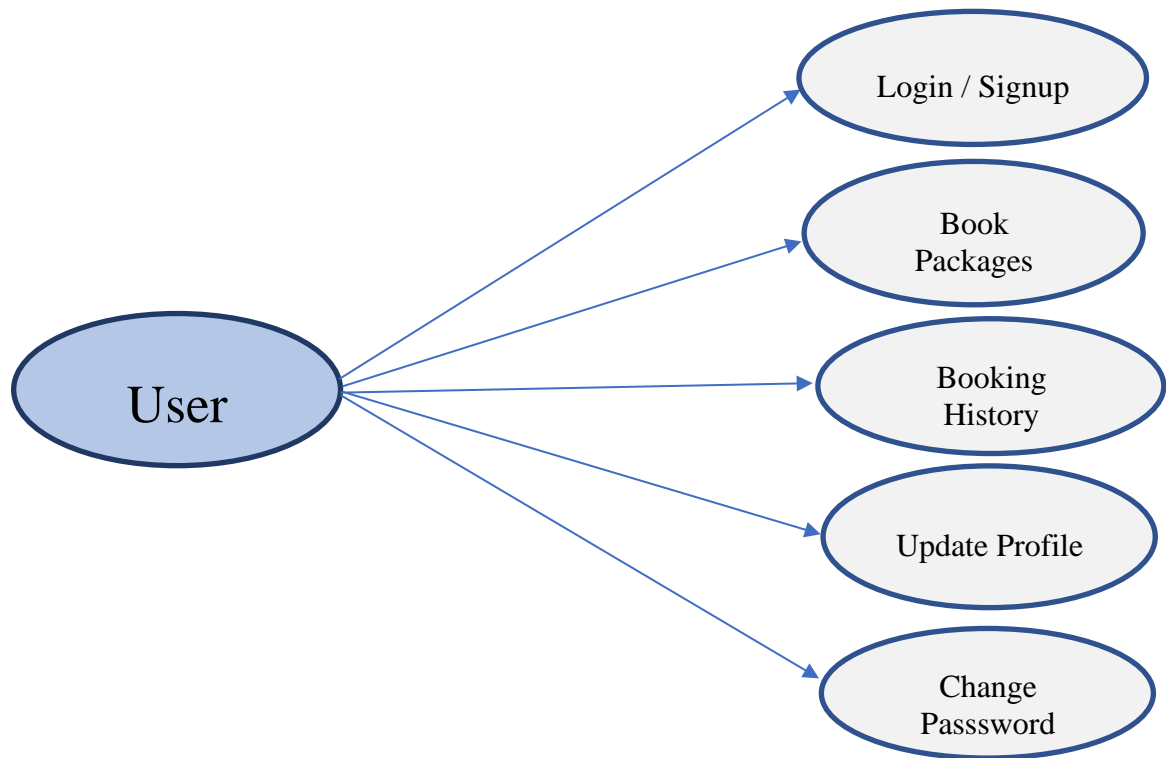

Chart 4.b.2 user modular chart

5. SOFTWARE & HARDWARE REQUIREMENT

SOFTWARE CONFIGURATION :

Operating System	:	Windows 10
Web server	:	XAMPP Server
Web Browser	:	Internet Explorer 9.0
Designing Tool	:	VS CODE
Server-Side Scripting	:	HTML
Client-Side Scripting	:	CSS
Backend	:	PHP & MySQL

HARDWARE CONFIGURATION :

Processor	:	P III 700 MHz
RAM	:	64 MB RAM
Hard Disk Drive	:	20 GB HDD
Keyboard	:	104 keys
Mouse	:	Logitech Mouse
Monitor	:	15" digital color monitor
Display Type	:	VGA

6. Detailed System Analysis

a. Data Flow Diagram :

ZERO Level DFD :- SYSTEM INPUT/OUTPUT LEVEL

A level-0 DFD describes the system-wide boundaries, dealing inputs to and outputs from the system and major processes. This diagram is like the combined user-level context diagram.

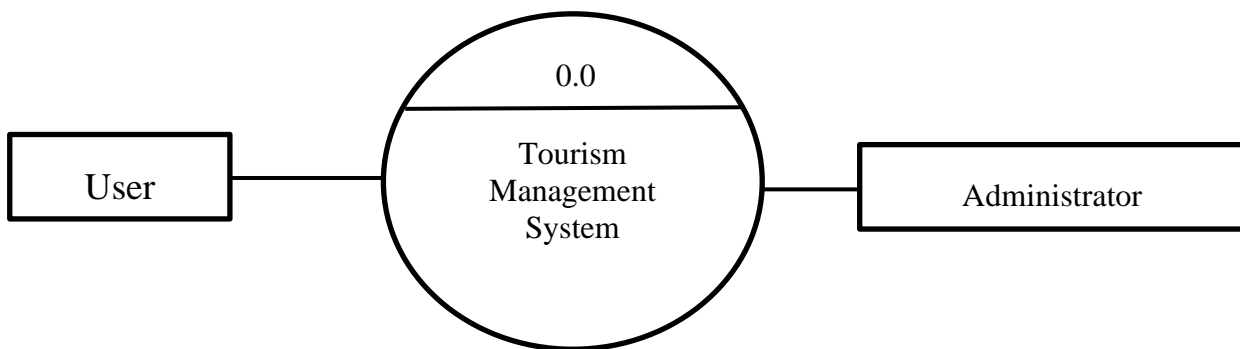

Chart 6.a.1 Zero Level DFD

First Level DFD :- SUB-SYSTEM LEVEL DATA FLOW

A level-1 DFD describes the next level of details within the system, detailing the data flows between subsystems, which makeup the whole.

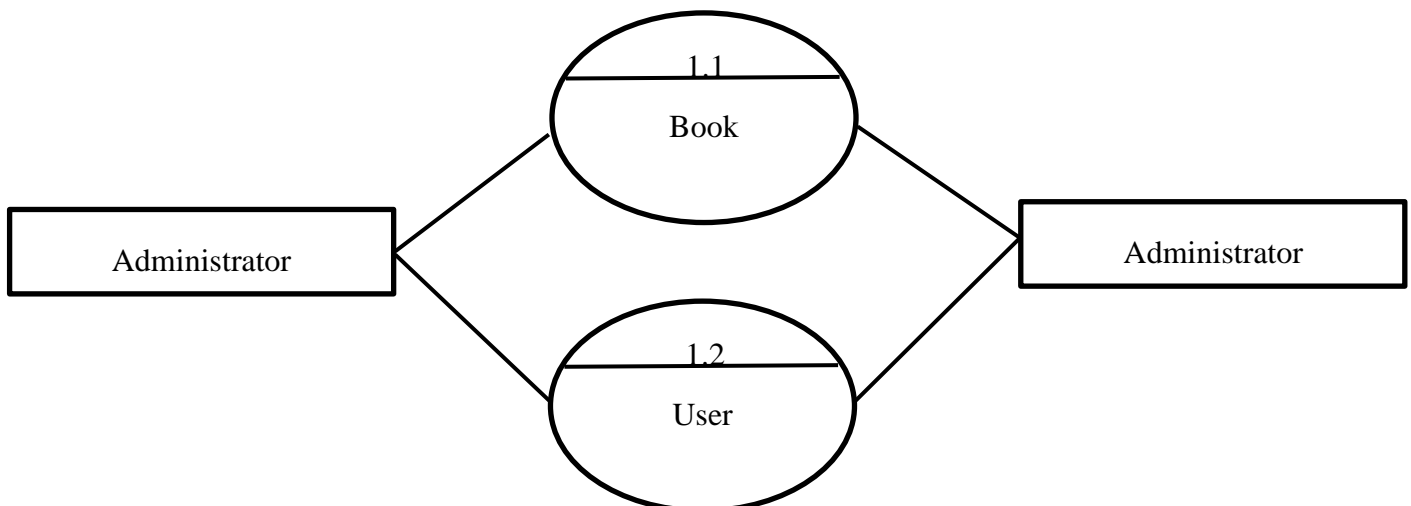

Chart 6.a.2 First Level DFD

b. Number of Modules and Process Logic :

It has two modules Admin and User

Admin:

- **Home Page :** The main page, neatly designed page, and their page show dashboard, statistics of bookings, transactions, messages to the administrator.
- **Login Page:** Here login option is provided to login the administrator.
- **Database Screen** (people who booked package): The screen shows how much people have booked the packages. It's only seeing but changes the database only can done by admin.
- **Admin Home Page:** Admin home page that can possible to change add, alter and modify, for these databases.

User

- **Home Page:** The main page, neatly designed page, and their page show information about the packages(India and International), details about the packages, and other offers of tour.
- **User Login Page:** Here login option is provided to login. Also new signup option is provided to new user sign up.
- **Database Screen** (people who donate fund): These pages only see who has booked for tour packages that cannot be change by user and their one more option is user can cancel, view profile, and update the details.

c. Data Structures and Tables :

Smiles For Miles Tourism Contains 6 MySQL Tables

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	id	int(15)			No	None		AUTO_INCREMENT	Change Drop More
2	admin_id	varchar(200)	latin1_general_cs		No	None			Change Drop More
3	password	varchar(200)	latin1_general_cs		No	None			Change Drop More

Table 1. admin_login

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	pkgid	int(255)			No	None		AUTO_INCREMENT	Change Drop More
2	pkg_location	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
3	pkg_name	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
4	pkg_dst	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
5	pkg_type	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
6	pkg_duration	int(255)			No	None			Change Drop More
7	pkg_features	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
8	pkg_price	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
9	about_package	varchar(1000)	utf8mb4_general_ci		No	None			Change Drop More
10	pkg_img	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More

Table 2 & 3. india_packages & intl_packages

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	bkid	int(255)			No	None		AUTO_INCREMENT	Change Drop More
2	pkgid	int(255)			No	None			Change Drop More
3	pkg_location	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
4	pkg_name	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
5	user_email	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
6	user_members	int(255)			No	None			Change Drop More
7	user_amt	int(255)			No	None			Change Drop More
8	user_date	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
9	user_status	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
10	user_transaction	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
11	date	datetime			No	current_timestamp()			Change Drop More

Table 4. user_bookings

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	id 	int(11)			No	None		AUTO_INCREMENT	 Change  Drop  More
2	user_fullname	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
3	user_email	varchar(255)	latin1_general_cs		No	None			 Change  Drop  More
4	user_mobile	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
5	user_password	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
6	user_dob	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
7	user_gender	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
8	user_nation	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
9	user_address	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
10	user_document	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
11	user_document_id	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More

Table 4. user_data

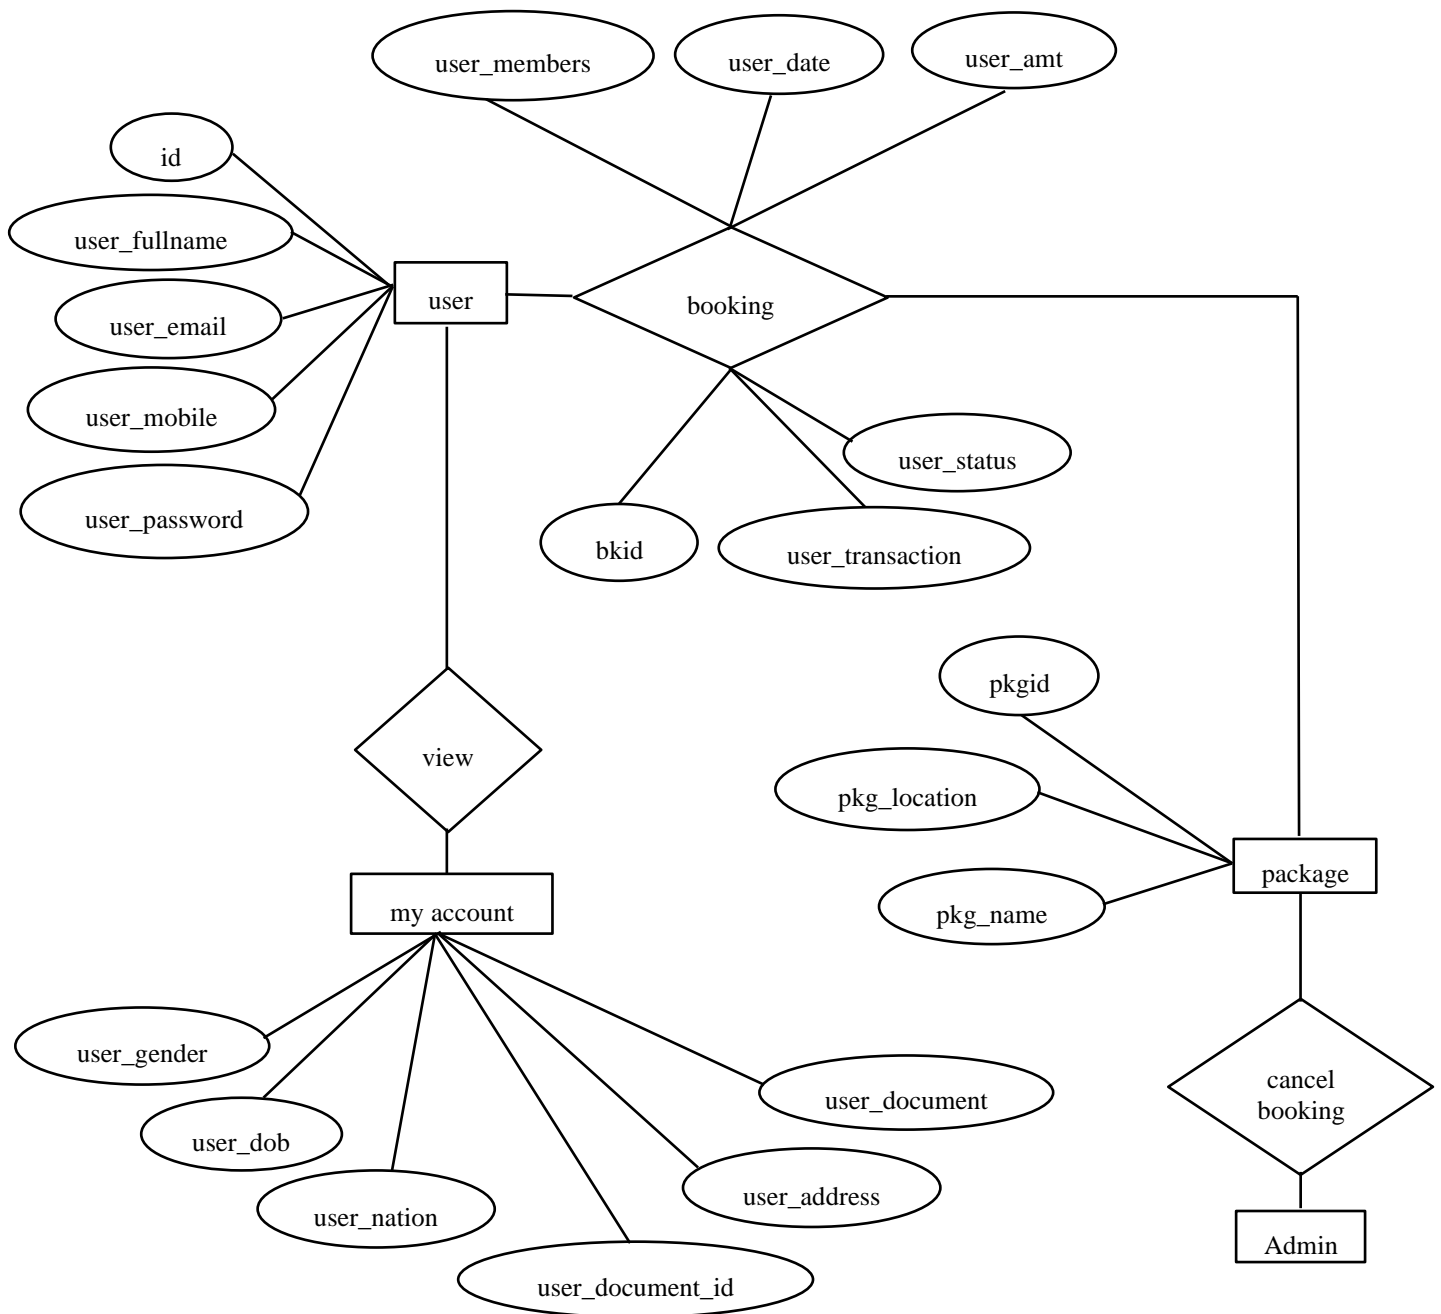

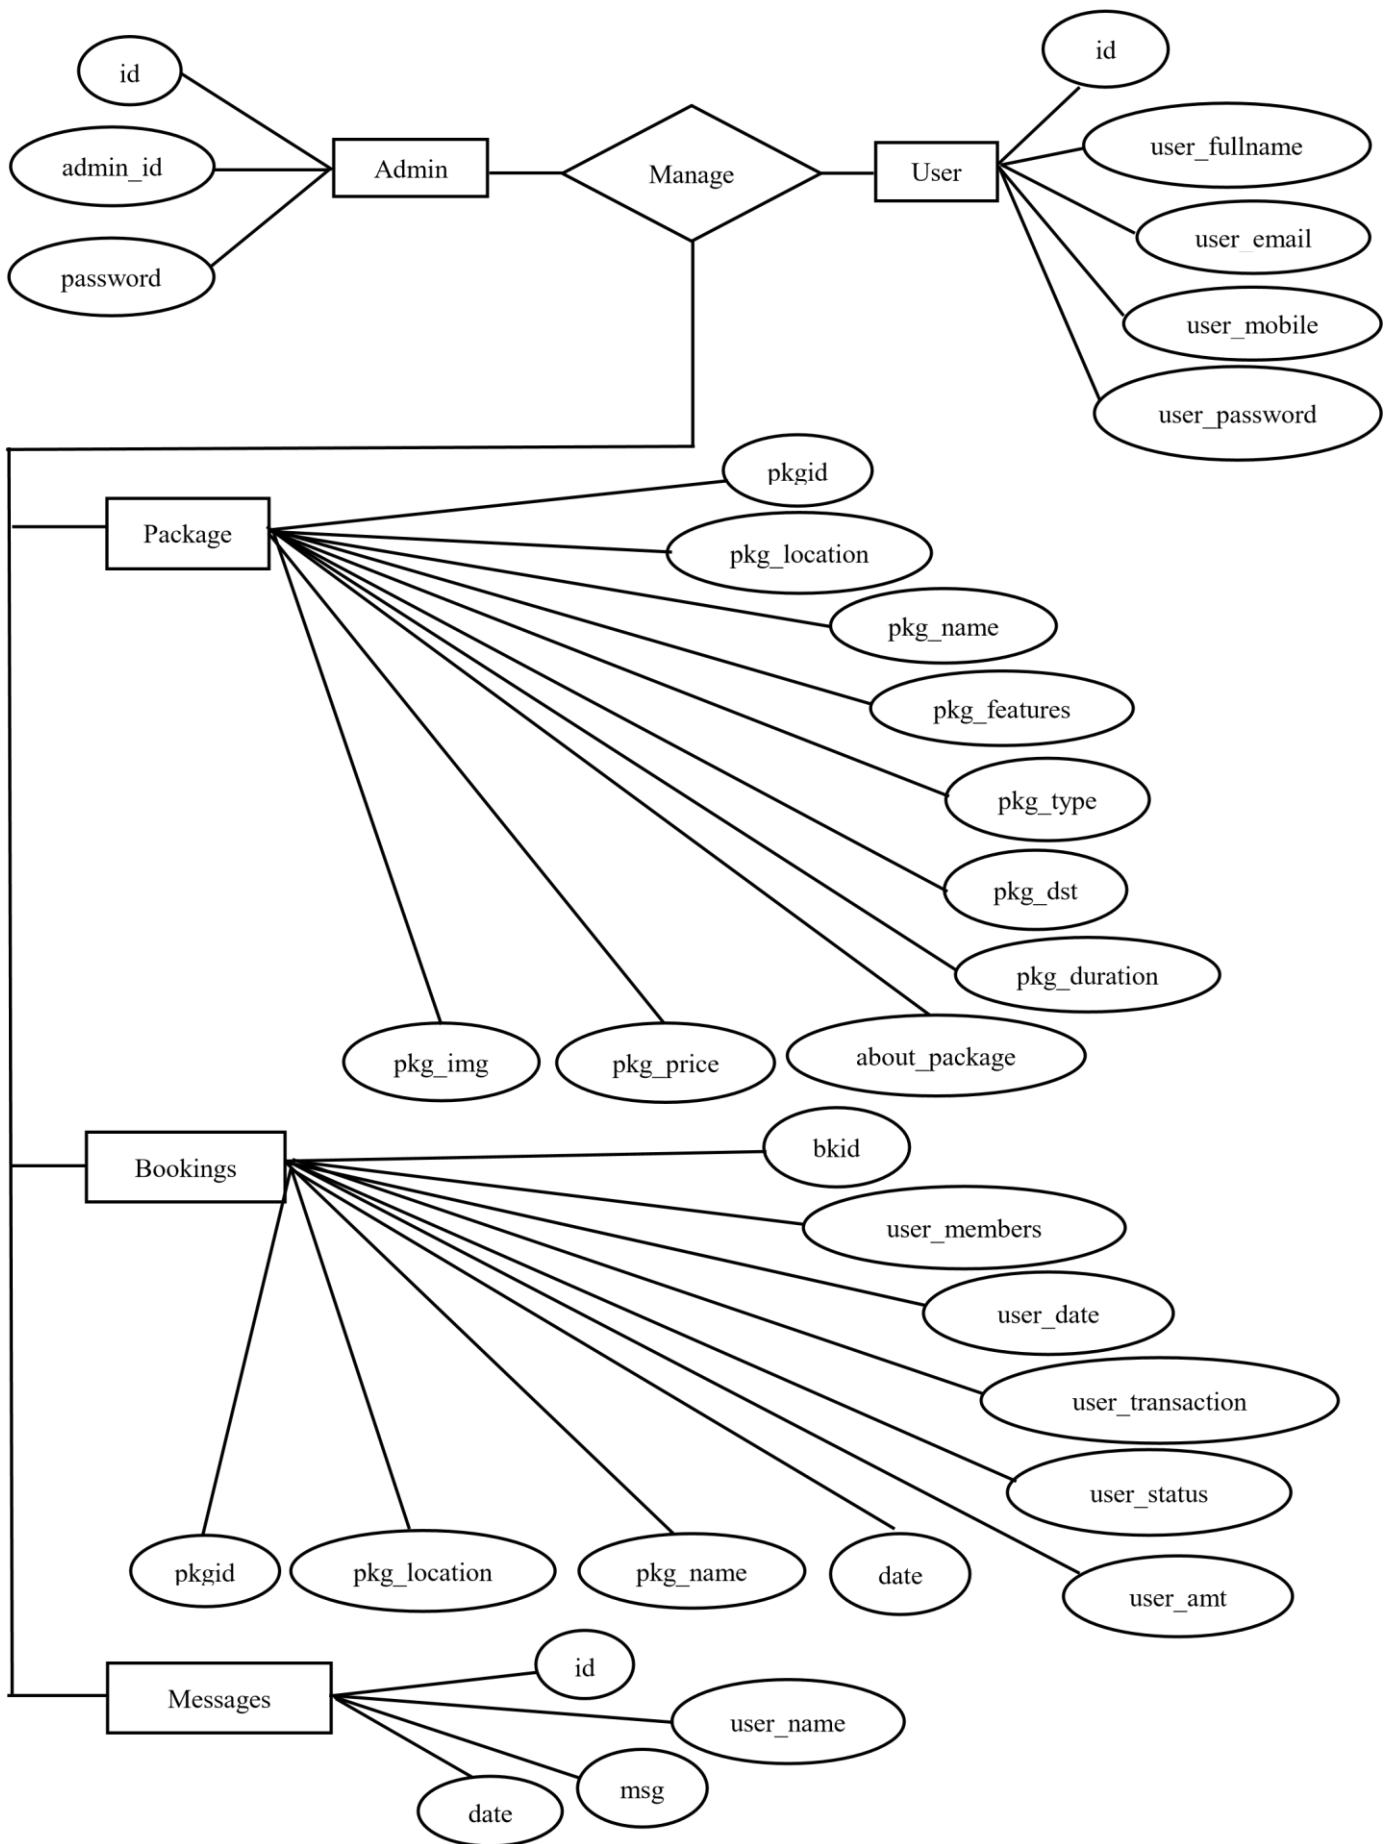

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	id 	int(255)			No	None		AUTO_INCREMENT	 Change  Drop  More
2	date	datetime			No	current_timestamp()			 Change  Drop  More
3	user	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More
4	msg	varchar(255)	utf8mb4_general_ci		No	None			 Change  Drop  More

Table 4. user_messages

8. Testing & Validation Checks

Validation testing is the process of ensuring if the tested and developed software satisfies the client /user needs.

There are two types of validation are available in PHP. They are as follows

- Client- Side Validation - Validation is performed on the client machine web browsers.
- Server-Side Validation – After submitted by data, the data has sent to a server and perform validation checks in server machine.

Testing is the process of evaluating and verifying that a software product or application does what it is supposed to do. The benefits of testing include preventing bugs, reducing development costs and improving performance.

It is not possible that every data feed to the computer must be acceptable. Sometimes the operator feed some wrong data, but machines have validation for checking the data whether it is valid or not. It executes the data if the data is not valid and gives message to the end user. Validation checks provide a critical form of inspection and validation for computer operating systems. When a computer receives any form of data input, a validation check is used to ensure that the data received matches the specific parameter type required by the application receiving it. The procedure of validation and execution of the data is the self-adjusting of the computer, which is the vital point of the computer system.

9. System Security And Measures

The information stored should be kept in such a way that it does not get lost or stolen. Security of data means protecting data against accidental or intentional disclosure to unauthorized person or even unauthorized modification or destruction privacy means that individuals and corporation should have due right to determine themselves when and how and to what extent information about them to be transmitted to others.

10. Implementation, Evaluation And Maintenance

Implementation is the stage where theoretical design turned into a working system. Implementation is planned carefully to propose system to avoid unanticipated problems. Many preparations involved before and during the implementation of proposed system. The system needed to be plugged in to the organization's network then it could be accessed from anywhere, after a user login into the portal. The tasks that had to be done to implement the system were to create the database tables in the organization database domain. Then the administrator was granted his role so that the system could be accessed.

The entire system was developed using the PHP, MySQL as backend, HTML, CSS and JavaScript for frontend, and Local Web Server. The Local Web Server is used to understand the clients request and to send response to them. Hence the design of the entire system is user friendly.

The system is working when implementation phase has been completed.

The two main activities are:

- a) Post Implementation
- b) Maintenance

Post implementation activity take place after about a year is to determine that whether the system is perfectly working or not, whether the system is satisfying the user need or not if not changes are made to system to make it perfect. Maintenance is part of SDLC. It has following task.

- a) Compacting errors
- b) Resolving necessary changes
- c) Enhance or modifies the system.
- d) Assign staff to perform maintenance

11. Future Scope Of The Project

Tourism is currently recognized as a global industry which is growing at a high rate like any other industry. Access to relevant and accurate information is at the heart of tourism. Here, the proposed project on Tourism Management System tries to bridge the gap by noting what a tourist perceives as relevant. Hence, the aim of this project entails the design and implementation of a platform that will assist tourists in gaining access to travel to various tourist locations. The project also helped to provide knowledge about the latest technology used in developing web enabled application and client server technology that will be great demand in future.

It is worth mentioning that this project work is open for further enhancement, with the expectation that it becomes more robust and better enhanced; covering every single tourist site. For a modified system, the user needs to just login into the application and can find the routes, costs, hotels, adventure, transportations and book immediately and complete the booking process for a successful transaction. In the aspect of tourism, Internet and web technologies have made more readily available information on tourist locations, accommodations, transportation, shopping, food, festivals, and other attractions, thus improving the whole tourism experience.

12. Future Scope Of The Project
